College Event Management System

Software Requirements Specification

Introduction

The College Event Management System is a web-based application designed to make organizing and participating in college events easier. It will provide one place for students to explore events and register, while organizers can manage event details and participants. The system will also include QR-code attendance, feedback, and an event recommendation feature.

Objectives

- Make college event management easier and reduce manual work.
- Allow students to view events and register online.
- Record attendance using QR codes.
- Collect ratings and feedback after events.
- Recommend events based on student interests and previous participation.
- Help administrators monitor registrations, attendance, and feedback.

Scope of the System

The system will provide the following features:

- Students can create an account, log in, browse upcoming events, register, view their registrations, receive recommendations, and submit feedback.
- Organizers can create and update events, view participant lists, and record attendance.
- Administrators can manage the system and view overall event statistics.

The first version will be a web application. Online payments and payment gateway integration are not included in the current scope.

Main Requirements

The main functional requirements of the system are:

- User registration and login, with separate access for students, organizers, and administrators.
- Event creation and editing, including event name, description, date, time, venue, category, and registration limit.
- Online event registration, with checks for duplicate registrations, closed registration, and full events.

- QR-code attendance linked to a student's registration, including validation and recording of check-in time.
- Feedback and ratings after an event, with organizers able to review feedback for their events.
- An administrative dashboard showing event, registration, attendance, and feedback summaries.
- Event recommendations based on student interests and previous participation, with a fallback to selected interests or popular upcoming events when no history is available.

Software and Hardware Requirements

The proposed requirements are:

- Platform: Web-based application accessible through a modern browser on a computer or mobile device.
- Frontend: HTML, CSS, and JavaScript.
- Backend: Python, PHP, or Node.js (one will be selected for implementation).
- Database: MySQL for storing user, event, registration, attendance, and feedback records.
- Recommendation module: A suitable machine-learning library or recommendation method.

Non-Functional Requirements

- The system should be simple to use and work on common modern browsers.
- Pages and common actions should respond quickly during normal use.
- User accounts and private information should be protected.
- Only authorized organizers and administrators should access management features.
- Registration, attendance, and feedback records should be stored accurately.
- The system should display clear messages when an action succeeds or fails.

Expected Outcome

The system is expected to:

- Reduce manual work in organizing college events.
- Make registration and attendance tracking more reliable.
- Help organizers understand participant feedback.
- Help students discover events matching their interests.

Conclusion

The College Event Management System will provide a single platform for managing college events and student participation. By combining event registration, QR-code attendance, feedback, and event recommendations, it will make event management more convenient for students, organizers, and administrators.
